

Waste Compactor Cleaning

The Benefits of Waste Compactor Cleaning

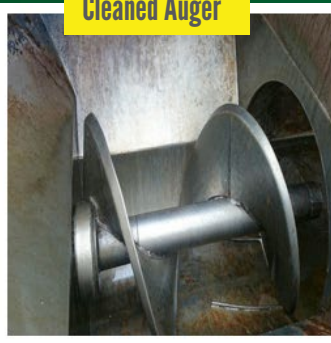

Wheelie Bin Cleaning Man has developed an on site, complete compactor clean and odour control service which includes the following 3 step process:

1. Hot water, high pressure cleaning inside and outside of the compactor which will reduce bacteria and odour. This also leaves the compactor looking aesthetically better. All waste water is removed from site after cleaning and disposed of off-site.
2. Odour controlling of the surrounding area. We use our innovative products to eliminate odour in and around the compactor after cleaning. This helps to deter pests, insects and odour around the compactor area.
3. The removal of waste from behind the Blade – The removal of waste from this area will reduce breakdowns and maintenance on the working mechanisms that operate the blade such as, the rams and hydraulic hoses.

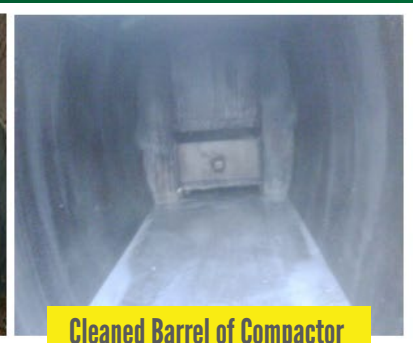

So why not have Wheelie Bin Cleaning Man produce an annual maintenance and odour control package for your compactor and surrounding area.
