Bin Cleaning and Sanitising

Our bin cleaning & sanitising is considered No.1 in our industry, here's why

WE use FRESH water, we do not at any stage use recycled water on the vehicle that can be cross contaminated from previous bin cleans.

WE clean bins with HOT water for a more hygienic outcome

WE retain ALL waste water on our vehicles ensuring a healthier, more hygienic finish for the environment. We discharge waste water in a waste water interceptor at our yard that processes it back to Melbourne Water for treatment.

WE hygienically clean bins thoroughly IN and OUT with a purpose-built self-contained bin cleaning vehicle.

Why use our Odour Control Pods

OUR Odour control pods are a simple, inexpensive solution to the age-old problem of odour control in bins. Our pods do more than mask smells, it absorbs odours and releases a blend of oils which bind and eliminate odours and the bacteria and fungi which cause them.

- The oils release as a micro mist, and stay suspended in the air for several hours
- The mist contacts and kills the odour
- They absorb moisture and eliminate the odour that moves around in the air
- In smaller spaces the odour pods will inhibit the growth of bacteria
- Natural and renewable

Best areas of use

Rubbish bins, Aged Care facilities, Bathrooms, Smokers area, Child care facilities, gyms, garbage bin rooms, bin chute rooms, Vet surgeries, Laundry rooms,

Our business partners include

Councils
City of Dandenong,
Casey,
Booroondara,
Yarra,
Frankston,
Mornington
Bayside.

Public Spaces
Chadstone shopping centre,
Monash University,
Coles and Woolworths
Royal Women hospital

Zoos and Sacturaries
Melbourne Zoo
Werribee zoo
Healesville Sanctuary
