Odour Control Pods

The Odour Control Pods work in two ways.

Firstly, most importantly to the health system, the oils are released from the pod into the air as a micro mist, it cannot be seen. They will stay suspended in air for several hours. Any microbe (Odour) that the oils contact will be killed by the oil mixture.

Second, they absorb moisture and the microbes (Odour) that move around in the air. Once absorbed into the pod, the microbes (Odour) will be eliminated. (in smaller areas, the reduction in moisture will also inhibit the growth of bacteria).

Essential oils are released as a micro mist, it cannot be seen and stays suspended in the air for several hours

Any microbe (odour) that the oils come in contact with will be killed by the oil mixture

Odour Pods absorb moisture, which can inhibit the growth of bacteria. Airborne odours are drawn in the Odour Control Pods.

Odour Pods are an environmentally friendly and energy free solution to odour problems

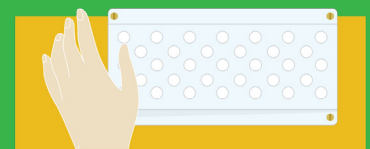

Odour Pods are comprised of Minerals, essential oils and earths - natural and renewable

Odour control is going great guns here and I have reports to prove it. We have sensors in the toilets that detect ammonia and so far in the Males no ammonia detected after installing your Odour Control Pods. Great result!

David Farmer
Operations Manager
Brandon Park Vicinity Centres

Using Odour Pods

Odour Control Pods are to be placed in any enclosed area where odour is a problem. From rubbish bins of all sizes, toilets, Veterinary surgeries, pet parlors, laundry rooms & baskets, Aged care facilities, patient rooms, reception areas, bathrooms, smokers areas, elevators, bin rooms & chutes, restrooms, gyms & spas and anywhere there is an offensive odour.

1. Affix Odour Control Pod holder to area

2. Slide Odour Control Pod into holder

3. Enjoy an odour free environment
