

Vapour Odour Eliminator

The Vapour Odour Eliminator automatically omits the odour mechanism into the air to eliminate the airborne odours by using a unique odour attachment characteristic which is proven to neutralize a wide range of malodours. The product functions effectively by neutralizing specific organic molecules and reducing their concentration in a vapour phase.

Getting into good hygiene habits!

Vapour Odour Eliminator is recommended for the removal of malodours, bacteria, fungi and any other matter including from, foodstuffs, alcoholic beverages, nicotine and tobacco smoke, waste bins, medical waste and many other problem odorous materials. It reduces the activity of mould and also has proven fungicidal activity and is effective against industrial pollutants.

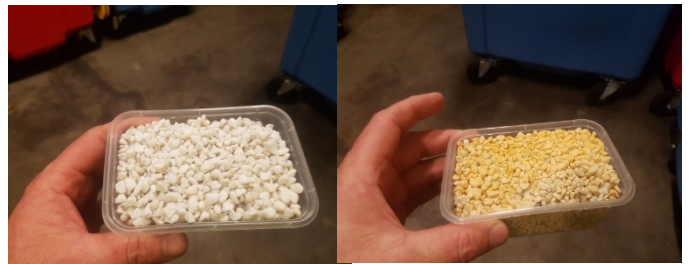

Pest reduction (pests are attracted by odours, reduce odour, reduce pest attraction)

Odour Captured in one week in bin room

Testimonial from Westfield Shopping Centre

Thank you for the recent service Wheelie Bin Cleaning Man provided at Westfield Knox. As you'd be aware, your team cleaned and sanitised our waste compactors, comingled recycling bins and used cooking oil tanks as well as installing the Vapour Odour Eliminator in the Brisbane La dock.

As usual the cleaning standard delivered was exceptionally high and the work was completed without disruption to centre operations. I am impressed with the Vapour Odour Eliminator that has transformed the Brisbane Lane waste room from an often foul smelling area into a space that is now free of any offensive odours. I think the real testament to the quality of this product was the transformation at Westfield Geelong in the waste chute room which was really quite amazing.

I look forward to continuing working with you to maintain the waste facilities at Westfield Knox. I can also let you know I have heard nothing but positive feedback from our other Victorian centres on your service.
